

**ZVA-Z Series**

**Product Description**

Millimeter-wave measurements in the V, E, W, F, D, G, J and Y band – network analysis in frequency ranges from 50 GHz to 500 GHz depending on the converter model. Featuring a wide dynamic range, the RPG converters offer high operating convenience and allow fast measurements. Two-port measurements can be performed using a four-port network analyzer and two converters; no external generator is required. When using a two-port network analyzer, an external generator is needed to supply the LO signals.

**Description**

The ZVA-Z110 converters, offered for the ZVA family, enable network analysis in the W band (75 GHz to 110 GHz). Test configurations for such measurements have so far been implemented only with coaxial connector systems for a frequency range up to approx. 40 GHz. The term 'multiport measurements' was created for this type of measurements.

**Features**

- Variable output power
- Electronic power control
- Automatic parameter setting
- Convenient handling
- Multiport and true differential measurements
- Pulsed measurements
- Calibration kit
- ZVA-Z325 and ZVA-Z500 special compact version
- ZVA-Z90E, ZVA-Z110E: Electronic power control for power calibration and calibrated power sweeps
